

HOT PIN

Material
stainless steel (inox)

Dimensions
ø10 cm / 3.94"

The classic PIN hanger is created by seam welding two sheets of metal and deforming it through inner air pressure using a compressor. The HOT PIN is similar but is formed through pressure formed within the object itself. The user receives the product flat packed and sealed with our

secret potion locked inside. At temperature of 200°C the HOT PIN transforms from a flat 2 dimensional object gaining a bulbous 3 dimensional shape. This way anyone can bake their own DIY hangers at home.
